

Additional file commands

Adapted from materials by Dr. Carrier

wc - Word count

Usage:

```
wc [file]
```

wc - Word count

Usage:

```
wc [file]
```

Counts lines, words, bytes by default

wc - Word count

Usage:

```
wc [file]
```

Counts lines, words, bytes by default

To narrow it to a certain field:

```
wc -l [file]
```

wc - Word count

Usage:

```
wc [file]
```

Counts lines, words, bytes by default

To narrow it to a certain field:

```
wc -l [file]
```

-w for words **-b** for bytes

wc - Word count

Usage:

```
wc [file]
```

Counts lines, words, bytes by default

To narrow it to a certain field:

```
wc -l [file]
```

-w for words **-b** for bytes

Operates on stdin if no file given

`cut` - Grab columns of delimited file

`cut` - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

Important options

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

Important options

```
--delimiter=X -> Set delimiter
```

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

Important options

```
--delimiter=X -> Set delimiter
```

```
-f N -> Grab the Nth delimited field (start at 1)
```

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

Important options

```
--delimiter=X -> Set delimiter
```

```
-f N -> Grab the Nth delimited field (start at 1)
```

```
--complement -> Ignore these fields instead
```

cut - Grab columns of delimited file

Delimited - Fields separated by a certain character

E.g., Commas, tabs, spaces

Usage:

```
cut [options] [file]
```

Important options

`--delimiter=X` -> Set delimiter

`-f N` -> Grab the Nth delimited field (start at 1)

`--complement` -> Ignore these fields instead

Operates on stdin if no file given

tr - Translate characters

tr - Translate characters

Usage:

```
tr [options] [set1] [set2]
```

Translates characters in set1 to those in set2

tr - Translate characters

Usage:

```
tr [options] [set1] [set2]
```

Translates characters in set1 to those in set2

Note: Operates on stdin

tr - Translate characters

Usage:

```
tr [options] [set1] [set2]
```

Translates characters in set1 to those in set2

Note: Operates on stdin

Replace 'a' with 'b':

```
tr a b < file
```

tr - Translate characters

Usage:

```
tr [options] [set1] [set2]
```

Translates characters in set1 to those in set2

Note: Operates on stdin

Replace 'a' with 'b':

```
tr a b < file
```

Also has many useful sets:

```
tr [:upper:] [:lower:] < file
```

tr - Translate characters

Usage:

```
tr [options] [set1] [set2]
```

Translates characters in set1 to those in set2

Note: Operates on stdin

Replace 'a' with 'b':

```
tr a b < file
```

Also has many useful sets:

```
tr [:upper:] [:lower:] < file
```

Can also delete characters:

```
tr -d '#' <file
```
