

git - branching

Adapted from materials by Dr. Carrier

What are branches?

What are branches?

Like having multiple “workshops” at once

What are branches?

Like having multiple “workshops” at once

Branches have shared history

What are branches?

Like having multiple “workshops” at once

Branches have shared history

Changing one does not immediately affect another

Why would we use branches?

Why would we use branches?

- We like to keep “main” branch working

Why would we use branches?

- We like to keep “main” branch working
- Quick bug fixes

Why would we use branches?

- We like to keep “main” branch working
- Quick bug fixes
- Feature development

Why would we use branches?

- We like to keep “main” branch working
- Quick bug fixes
- Feature development
- Coordinating between people

Why would we use branches?

- We like to keep “main” branch working
- Quick bug fixes
- Feature development
- Coordinating between people
 - You can branch off of branches

Why would we use branches?

- We like to keep “main” branch working
- Quick bug fixes
- Feature development
- Coordinating between people
 - You can branch off of branches

What's the name of our default branch?

What's the name of our default branch?

- Used to be “master”

What's the name of our default branch?

- Used to be “master”
- Now often “main”

How do we use branches?

How do we use branches?

- List branches, see current

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`
- Delete a branch

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`
- Delete a branch
 - `git branch -d name`

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`
- Delete a branch
 - `git branch -d name`
- Merge branches

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`
- Delete a branch
 - `git branch -d name`
- Merge branches
 - switch to target branch (one we're merging into)

How do we use branches?

- List branches, see current
 - `git branch` (shows all local)
 - `git branch -a` (also shows remote)
 - `git status` also lists current branch
- Create a new branch
 - `git branch name` (does NOT switch to branch)
 - `git switch -c name` (does switch)
- Switch to existing branch
 - `git switch name`
- Delete a branch
 - `git branch -d name`
- Merge branches
 - switch to target branch (one we're merging into)
 - `git merge source_name`

How do we use branches? OLD WAY

- Create a new branch
 - `git checkout -b name` (does switch)
- Switch to existing branch
 - `git checkout name`
