.bashrc

Adapted from materials by Dr. Carrier

Configuration files

Configuration files

`~/.bashrc` on your local machine

    Runs when you start a terminal

Configuration files

`~/.bashrc` on your local machine

    Runs when you start a terminal

`~/.profile` on EOS

    Runs when you ssh in

    On EOS, this also runs your .bashrc

Configuration files

`~/.bashrc` on your local machine

    Runs when you start a terminal

`~/.profile` on EOS

    Runs when you ssh in

    On EOS, this also runs your .bashrc

To run updates after editing a file:

- Either re-login
- Or use source (e.g., `source ~/.bashrc`)

Configuration files

`~/.bashrc` on your local machine

    Runs when you start a terminal

`~/.profile` on EOS

    Runs when you ssh in

    On EOS, this also runs your .bashrc

To run updates after editing a file:

- Either re-login
- Or use source (e.g., `source ~/.bashrc`)

These contain bash commands

    We'll talk more about similar files soon!

Aliases

Aliases

Common example: la

```
alias la='ls -A'
```

Aliases

Common example: la

```
alias la='ls -A'
```

Now, running "la" is the same as running "ls -A"

Aliases

Common example: la

```
alias la='ls -A'
```

Now, running "la" is the same as running "ls -A"

Why does this need to be in ~/.bashrc / ~/.profile?

Aliases

Common example: la

```
alias la='ls -A'
```

Now, running "la" is the same as running "ls -A"

Why does this need to be in ~/.bashrc / ~/.profile?

Ideas for other useful aliases?

Environment variables

Variables that can be used in this shell and its child processes

Environment variables

Variables that can be used in this shell and its child processes

How to view our environment variables?

Environment variables

Variables that can be used in this shell and its child processes

How to view our environment variables?

`printenv`

Environment variables

Variables that can be used in this shell and its child processes

How to view our environment variables?

`printenv`

What are they used for?

Environment variables

Variables that can be used in this shell and its child processes

How to view our environment variables?

`printenv`

What are they used for?

Example: PATH - Where bash looks for programs to run

Editing environment variables (e.g., PATH)

Best to do this in ~/.bashrc

Editing environment variables (e.g., PATH)

Best to do this in ~/.bashrc

Add a new line:

```
export PATH="newpath:$PATH"
```

Editing environment variables (e.g., PATH)

Best to do this in ~/.bashrc

Add a new line:

```
export PATH="newpath:$PATH"
```

":" allows us to have multiple values

Note that bash searches PATH in order

Installing software from source

Installing software from source

Why might we want to do this?

Installing software from source

Why might we want to do this?

Working through an example: sl

Installing software from source

Why might we want to do this?

Working through an example: sl

First, let's clone the repo:
```
git clone git@github.com:mtoyoda/sl.git
```
If you don't have ssh keys setup on EOS:
```
git clone https://github.com/mtoyoda/sl
```
Build the application, if necessary
